Presentation Overview

- Introduction
  - Motivation
  - Literature review & related work
- Project idea
- Proposed solution
- Methodology and approach
- Project design
- Overall architecture
- Conclusion

Introduction

- Technology shapes children's lives
- Most habit apps focus on routines, not values
- BVN makes values a part of everyday life

Motivation

- Lack of Arabic value-based habit-tracking
- Children learn values through action, not just lessons
- Technology should strengthen character, not just entertain
- BVN bridges the gap between values & daily life

LR &Related Work

- **Chore Monster & Habitica: These applications focus on routine-building but lack cultural integration**
- **Supers: Introduces gamification but lacks focus on value enrooting**
- **Existing Research: Highlights the effectiveness of interactive, culturally relevant tools in child engagement.**

Project Idea

- BVN is a value based habit-tracking app designed for children aged 6–9
- Encourages Internalization of values like honesty, cooperation, and responsibility.
- Uses an engaging UI with rewards, and progress tracking
- Parental involvement through task assignment, progress monitoring, and reward customization.

Proposed Solution

- Task Management: Assign, track, and reward progress
- Parental Control: Customize tasks and rewards
- Cultural Integration: Arabic-focused content
- Monitoring & Reports: Track behavioral growth

Methodology & Approach

- Data Collection: Surveys from 70+ parents to assess needs and preferences
- Development Process: UI/UX Design tailored for children, Backend System, Gamification Techniques
- Technology Stack:
  - Front-end (Unity),
  - Back-end (MYSQL)

Project Main Design

- User Roles: Parent & Child
- Parent Features: Create tasks, customize rewards, track progress
- Child Features: Complete tasks, earn rewards, track values
- Gamification: Star charts, leaderboards, progress tracking

Overall Architecture

- System Components:
  - User Authentication
  - Task Management
  - Reward System
  - Data Analytics
  - UI Interaction

Overall Architecture

- Architecture Diagram:
  - Context Diagram
  - Database Flow
  - Class
  - Sequence Diagrams

Future Enhancements

- AI-powered task recommendations
- Expanded cultural values library
- Community-based challenges & engagement

Conclusion

- **Innovation: First Arabic gamified habit-tracking app**
- **Impact: Merges traditional values with modern tech**
- **Scalability: Expandable with more gamification & AI personalization**
